Project Deliverable A: **Team Contract, Client Meeting Preparation and Project Management Skeleton**

GNG 2101 – Intro. to Product Dev. and Mgmt. for Engineers

Faculty of Engineering – University of Ottawa

Objective:

As a team, review and complete the team contract questions and individually sign it. Prepare yourselves to better understand your client's problems, limitations, frustrations, desires, and needs and set up a project plan skeleton with the Notion platform.

Instructions:

A.1 Team contract: (must include team members' name and signature as well as the team name)

1. Teams must produce a completed contract based on the template provided on Brightspace. The contract should outline the team's procedures, expectations and consequences for failing to follow procedures and fulfill expectations. Individual members must show their understanding of these statements and their agreement to follow them by applying their signature to the contract. A contract template is provided on Brightspace, but feel free to customize it to your team's particular needs.

A.2 Client Meeting Preparation:

1. Summarize the things that you know about your client based on the project description provided on Brightspace.
2. Make a list of all the things you don't know about your client, but which you think would help you in better understanding their problems, limitations, frustrations, desires, and needs.
3. Describe the tools and methods you plan to use while interviewing and empathizing with your client, based on what you have seen in the course so far or other tools/methods you think could be effective.
4. Create an interview guide. You can use suggestions provided in the lecture or in the "Customer Interview Template" provided on Brightspace.

A.3 Project Management Skeleton:

1. One member of your team must create a Notion project plan. You can access the software here: https://www.notion.com/
2. Duplicate the template provided in Brightspace into your own account by opening the template link and clicking the duplicate button at the top right. Required completion dates for tasks with known due dates must be entered at this point (e.g. course milestones, see lecture 1).
    a. Share this project with the other teammates and your TA and PM.
3. Add more detailed tasks in your plan up until and including PD E. Define the dependencies between the tasks.
4. Identify which person from your team will be responsible for ensuring the completion of each task (one person per task) in the plan. Remember: being responsible for the task DOES NOT MEAN that you need to do all the work yourself. You are simply responsible for making sure your team gets the work done on time.

Important Note: If you are not sure, please ask as many questions as necessary on the best way to set up your plan early on. This is a critical component of your team's success. It is OK if you do not currently understand ALL the tasks in the template. We will revisit this plan in Project Deliverable C.

A.4 Goal Setting Reflection:

1. As a team, discuss the project and set your team goals. It is not enough to say: "we want to build an awesome prototype". You need to define:
    a. Exactly what your team will deliver by the end of the term.
    b. How your team is going to get there.
    c. What is expected from every team member to reach that goal.
2. Agree, as a team, what success looks like. Are you setting goals that must be met, or are they guidelines that will be reassessed continuously as you gain a better understanding of the project?
3. For each individual:
    a. Once you understand what part you, as an individual, will play in the team and the project, write down an inventory of your personal *strengths* and *weaknesses* related to your role in the project.
    b. Once you know your role on the team/project (#1), as well as your strengths and weaknesses (#3.a), determine your personal *objectives and key results* (OKR). See additional document on OKRs for a detailed explanation.

i. Your objectives are what you would like to achieve personally during the course. They should be tied to your team project goals. Set 3-5 *personal* objectives for the term.
ii. Key results are the metrics you will use to monitor your progress towards achieving your objectives, as well as measure success (#2). A key result should be measurable and verifiable within a defined timeframe. You should specify 2-3 key results for each objective.

c. The reflection from each individual team member should be ***no more than 300 words***.

For this personal reflection, it is advised that you re-read the course outline, your project description and your project deliverables A and B.

Submission:

Each team (***only one person from each team***) must submit a PDF copy of their team contract signed by ***ALL*** team members and an updated DOCX copy of the deliverable template, including the tracked changes, containing each other part of this deliverable by uploading the files as a single submission into Brightspace.

Due Date:

See Brightspace.
